

Assess your employee behavior to phishing attacks through simulated phishing emails.
English & Arabic Language Supported

Features

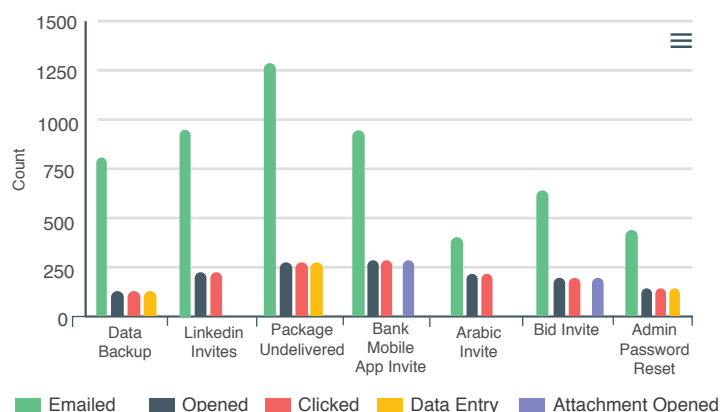

- › Simple interface
- › Easy to Use Dashboard
- › Automated workflow
- › SaaS model
- › Rich reporting interface including real time update of the campaign, effectiveness of various campaigns undertaken, susceptibility comparisons among departments / locations / user groups etc.
- › Variety of customizable email templates that address three key testing factors: attachments, embedded links, and requests for personal data.
- › Campaign Wizard to assist how and when campaigns run
- › Use region specific mock phishing web sites including DEWA, Kahrama, SECO, DHL, Tejari, Souq, Amazon-kw etc

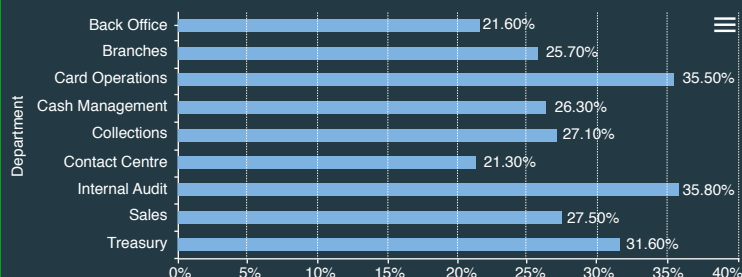

Benefits

- › Gauge your employees' understanding of the dangers associated with Phishing, Spear phishing and newer threats
- › Through mock attacks, evaluate your organization's level of susceptibility without exposing your network to an actual attack.
- › Protect your corporate systems from Phishing with increased security awareness
- › Use data from simulation exercise to impart better training and measure the effectiveness of your security awareness training post the training program
